

SkyView Risk Assessor for OS/400 & i5/OS

“Security Begins with an Assessment”

di-ag-no-sis (dī'əg-nō'sīz) - A critical analysis of the nature of something.

A comprehensive diagnosis is often overlooked when it comes to the security configuration of OS/400. Most system administrators only have the time to manage passwords and monitor a few, selected system values. But when it comes to security, the task extends beyond passwords and system values.

Part of the problem in doing a comprehensive diagnosis of the security of OS/400 is determining all of the areas that need to be analyzed and the method by which the analysis is completed. That's where the expertise of Carol Woodbury, former Chief Architect for OS/400 Security at IBM becomes, not only valuable, but necessary!

But more than that, to do a comprehensive diagnosis of the security of OS/400, you have to have the time and resources available to do it. With **Risk Assessor**, a product designed and coded to Carol Woodbury's specifications, you get an automated tool that leverages Carol's expertise and normally completes the job in about the time it takes you to go to lunch!

The net result with **Risk Assessor** is that you get a comprehensive report regarding the security configuration for OS/400. The report includes details about the issues discovered; explanations about the business risk the issue presents, and ways to start addressing the issues it finds.

And **Risk Assessor** can provide a uniquely unbiased, 3rd party evaluation of the OS/400 security of each OS/400 logical partition on which it is run.

SkyView Risk Assessor is ...

a **comprehensive, security diagnostic tool**, designed by iSeries expert Carol Woodbury, to automate the essential (and often legally compulsory) need to:

- Document your OS/400 Security
- Analyze and Interpret Your Risks
- Plan “How To” Remediate Issues

Risk Assessor produces:

- a Main Assessment Guide
- & Supplemental Detail Reports

Risk Assessor analyzes:

- System Values
- User Profiles
- Object Authorities
- Adopted Authorities
- TCP/IP Configuration
- Authorization Lists
- Job Descriptions
- Subsystem Descriptions
- Output queues
- And much more

Risk Assessor provides:

- WHY an issue was raised as a security concern
- WHAT to consider before making any changes
- HOW to approach “fixing” the issues that are found

System Requirements:

- 6 megs of disk
- OS/400 V4R4 or later

For Pricing: Contact SkyView Partners or an authorized SkyView Reseller.
